1 Introduction

Gold Crack EA comes as two Expert Advisors (EAs) for gold (XAUUSD) on MetaTrader 5. Each EA trades in **one direction only**:

Gold Crack EA BUY

BUY only. Builds a BUY basket and closes all positions together at one shared profit target (basket TP).

Gold Crack EA SELL

SELL only. Builds a SELL basket the same way, in the opposite direction.

How the EA works

1. **First entry:** the EA waits for price to move in the trade direction by **D1** before opening the first position. This level is kept inside the EA and is not visible at the broker.
2. **Layers:** if price moves against the position, the EA adds layers with larger lots (**E1**), spaced at least **S1 / S2** apart.
3. **Basket TP:** all positions in the basket share one TP: the basket average price plus **T1** points.
4. **New cycle:** after the basket closes, the EA prepares a new first entry.

Important

This is a grid / martingale strategy. It can produce many small profits, but a large one-directional price move can cause a large loss. Please read Sections 7 and 11 before using the EA on a real account.

2 Requirements

Item	Requirement
Platform	MetaTrader 5 (Windows desktop or VPS)
Account type	Hedging . Netting accounts are not supported. The EA stops with the message "MT5 hedging account required".
Symbol	XAUUSD (gold), using your broker's symbol name, for example <code>XAUUSD</code> , <code>XAUUSD.m</code> , <code>GOLD</code>
Timeframe	Any timeframe. The EA does not depend on the chart timeframe. M5 is recommended for display.
License	Live accounts need a License Key. Demo accounts do not need a license.
Internet	Required for license checks (live accounts). The URL <code>https://a689.link</code> must be allowed for WebRequest.
Broker minimum lot	V1 (starting lot) must match your broker's minimum lot and volume step.

3 Installation

- 1 In MT5, open **File** → **Open Data Folder**, then go to the `MQL5\Experts` folder.
- 2 Copy the Gold Crack EA **BUY** and / or **SELL** `.ex5` file into that folder.
- 3 Back in MT5, in the **Navigator** window, right-click **Expert Advisors** → **Refresh**. If the EA does not appear, close and reopen MT5.
- 4 Open **Tools** → **Options** → **Expert Advisors**. Tick **Allow algorithmic trading** and **Allow WebRequest for listed URL**, then add `https://a689.link` . Click OK.
- 5 Open an XAUUSD chart. Drag the EA from the Navigator onto the chart.
- 6 In the **Common** tab, make sure **Allow Algo Trading** is ticked.
- 7 In the **Inputs** tab, enter your **License Key** (live accounts only) and review the other settings. Click OK.
- 8 Make sure the **Algo Trading** button on the MT5 toolbar is green. The EA icon in the top-right corner of the chart turns blue when the EA is running.
- 9 Check the **Experts** tab. You should see `[LICENSE] ACTIVE` (or `DEMO MODE`) and `[READY] Initialization completed` .

Recommendation

Test the EA on a **demo** account for at least a few weeks before using a real account.

4 Settings (Inputs)

The values below are the defaults. "Point" means 0.01 for gold (for example, 110 points = \$1.10).

Input	Default	Description
=== A === License & entry		
License Key	—	Your license key, format <code>GTEA-XXXXX-XXXXX-XXXXX</code> . Bound to one MT5 account number. Not needed for demo accounts.
D1	50	Distance (points) for the first entry. BUY enters after price rises D1 from the recent low. SELL enters after price falls D1 from the recent high.
=== B === Lot		
V1	0.01	Lot size for the first layer. Must match your broker's minimum lot and volume step.
=== C === Grid & risk		
N	16	Maximum number of layers in one basket. The EA rejects the settings if the last layer's lot exceeds the broker's maximum lot.
S1	110	Minimum distance (points) between layers for layers 2 to 4.
S2	170	Minimum distance (points) between layers for layer 5 onwards.
T1	40	Basket TP (points), measured from the average price of all positions in the basket.
E1	1.68	Lot multiplier for each layer. Example: 0.01 → 0.02 → 0.03 → 0.05 → 0.08 ...
R1	0 (OFF)	Max Basket Loss. Loss limit for one basket, as a fraction of account balance at the start of the cycle. 0.2 = 20%. See Section 7.
P1	3	Maximum slippage (points) for orders. Only effective on Instant Execution accounts.
P2	2	Reserved. No effect in this version. Leave at default.
H1	0 (OFF)	After a basket has been open longer than H1 hours, the EA closes it only if the basket is in profit or at breakeven. 0 = OFF.
=== D === Magic number		
M1	BUY 837490 SELL 528101	Identifier for the EA's positions. Change it only if you run two copies of the same EA on the same symbol in the same account.

Input	Default	Description
=== E === Session pause & display		
F1	true	Stop new cycles near market close and open (based on the broker's session schedule).
T3	60	Minutes before market close.
T4	60	Minutes after market open.
F2	true	Show EA status information on the chart.
=== F === Daily target		
F3	false	Stop new cycles after the daily profit target is reached, until the next server day.
DT1	0	Daily profit target (account currency), counted from the EA's closed trades.
=== G === News filter		
F4	true	Stop new cycles around economic news (MT5 calendar). For gold, USD news is used. Major US policy events (for example FOMC, Fed Chair, Powell, tariffs) are always included.
N1	N3	Minimum news impact: N1 = low and above, N2 = medium and above, N3 = high only.
T5	30	Minutes before news.
T6	30	Minutes after news.
=== H === H4 candle pause		
F5	false	Stop new cycles around the close of each H4 candle (00:00, 04:00, 08:00 ... server time).
T7	15	Minutes before the H4 candle closes.
T8	15	Minutes after the new H4 candle opens.

Note

All filters (F1, F3, F4, F5) only block **new cycles**. An active basket is still fully managed: layers, basket TP and other protection keep running.

5 Chart buttons

Button	Function
STOP (red)	Stop new cycles. The active basket is still managed until it closes at TP. The button changes to START .
START (green)	Resume normal trading.
CLOSE ALL BUY (BUY EA) CLOSE ALL SELL (SELL EA)	Close all of this EA's basket positions in one click, after a YES / NO confirmation. The EA then switches to STOP . Press START to resume. Manual trades and other EAs are not touched.

The STOP state is saved and remains after MT5 is reopened.

6 Status display

Status	Meaning
ACTIVE	The EA is running normally.
INITIALIZING (...)	The EA is preparing or waiting for price for the first entry.
STOPPED	The STOP button was pressed. The active basket is still managed.
PAUSED (time filter)	Inside the session pause (F1) or H4 candle pause (F5).
PAUSED (news filter)	Inside a news window (F4).
PAUSED (market session closed)	The market is closed (for example, the weekend).
DAILY TARGET HIT	The daily profit target was reached (F3).
CLOSING BASKET	The EA is closing the basket.
CLEANUP RETRY	The broker rejected a close or order deletion. The EA retries automatically.
EQUITY RISK LOCK	Max Basket Loss (R1) was reached. See Section 7.
GRID SAFETY LOCK	The EA is waiting for broker confirmation of an order. New layers are held temporarily to prevent duplicate orders.
LOCKDOWN	The license is invalid, expired or cannot be verified. Existing baskets close at TP, no new cycles.
BLOCKED (...)	Trading is not allowed, for example Algo Trading is turned off. The reason is shown in brackets.

7 Built-in protection

Max Basket Loss (R1)

- Limits the loss of one basket as a percentage of account balance at the start of the cycle. Example: balance \$10,000 and $R1 = 0.2$ → the basket is closed when its loss reaches \$2,000.
- Only this EA's positions are counted. Deposits, withdrawals, manual trades and other EAs do not affect the calculation.
- When R1 is reached, the EA closes all basket positions and stops (status **EQUITY RISK LOCK**).
- To resume, **close MT5 completely and open it again**. Removing and re-attaching the EA, or changing timeframe, does not release this lock.
- In very fast markets, the actual loss can slightly exceed the limit.

Strongly recommended

Enable R1 to protect your account. Without R1, a large one-directional price move can wipe out the account.

Other protection

- **Duplicate-order protection:** every order is saved and confirmed before the next layer is allowed.
- **Restart recovery:** the EA's state is saved. If MT5 is closed while a basket is active, the EA resumes managing the basket when it is reopened.
- **One EA per basket:** the same EA cannot run twice on the same symbol and magic number within one terminal.
- **Layer handling during fast markets** to reduce the risk of layers stacking up during sharp moves.

8 Running BUY and SELL together

- Attach the BUY EA and the SELL EA to two separate charts (the same symbol is allowed). Their default magic numbers are already different.
- The two baskets run independently. A profitable basket on one side does not offset a losing basket on the other.
- Make sure your margin is enough for both baskets to reach their maximum layer at the same time.

9 VPS

- Use a VPS close to your broker's server. Aim for a ping under 10 ms, and avoid connections above 100 ms. The ping is shown in the bottom-right corner of MT5.
- The lower the ping, the more accurate the layer spacing.
- Do not run the EA on the same account in two places at once (for example, your PC and a VPS). This will open duplicate positions.
- The built-in MQL5 VPS in MT5 does not show buttons or popups. Use a regular Windows VPS if you need the STOP / CLOSE ALL buttons.

10 Troubleshooting

Message / situation	Solution
Popup "License verification needs internet access"	Add https://a689.link in Tools → Options → Expert Advisors → Allow WebRequest, then re-attach the EA.
"License Required" (EXPIRED / INVALID / WRONG ACCOUNT)	Check your License Key and account number. Contact support.
"MT5 hedging account required"	Open a hedging-type account with your broker.
"Invalid lot schedule: V1 ... incompatible with broker min/step/max"	Change V1 to match your broker's minimum lot and volume step.
"Layer X requires ... lots but broker maximum is ..."	Reduce N or V1.
"Another ... instance already owns this account, symbol and magic-number book"	The same EA is already running on another chart for the same symbol. Remove one of them.
Status "BLOCKED (EA trading disabled)"	Turn on the Algo Trading button and tick Allow Algo Trading in the EA settings.
Status "PAUSED (market session closed)"	Normal while the market is closed. The EA resumes automatically when the market opens.
Status "EQUITY RISK LOCK"	R1 was reached. Close and reopen MT5 to resume.

All EA messages appear in the **Experts** tab at the bottom of MT5. Include a screenshot of this tab when contacting support.

11 Risk warning

Trading forex and gold involves high risk. You can lose part or all of your capital.

This EA uses a grid / martingale strategy. Lot sizes increase as price moves against the position. A large one-directional price move without a reversal can cause a large loss or a margin call.

Past results, including backtests, do not guarantee future results.

Only use capital you can afford to lose. Test on a demo account first and enable Max Basket Loss (R1).

Users are fully responsible for their own settings and trading decisions.
